Micro-Needling

Automatic Micro-Needling via MicoPen® creates controlled micro-injuries to the skin in order to aid in the production of collagen and elastin. The skin's repair process results in a thicker epidermis with a softer appearance of wrinkles, improvement of skin tone, pore size, and acne scars. The micro-channels created allow topical hyaluronic acid or platelet enriched plasma (PRP) to be absorbed more effectively, enhancing the effects in deeper layers of the skin. PRP is a concentration of platelets from your own blood that aid in tissue regeneration. They support tissue repair, and aid in collagen and elastin production for beautiful, youthful results. PRP also addresses under-eye puffiness and dark circles to give you a more youthful, well-rested appearance.
